

Defrost and Chopping Board

PRODUCT DESCRIPTION

A revolutionary product for the kitchen! You can now defrost frozen food on this board ten times faster than on conventional bases, as this surface-sealed basic board is highly conductive of both cold and heat. This ensures that the thawing process is quick but gentle, so that it is not possible for bacteria to form.

The liquid that comes from the thawing process is collected by handy juice grooves. To then chop the thawed food, just click a chopping plate onto the non-slip basic board – the new Easy Click system makes this particularly easy.

The defrost board is made from a PTFE metal alloy. The chopping plates are made from food-safe and blade-protective polypropylene. The defrost board can be cleaned with normal dishwashing liquids, the chopping plates are dishwasher-safe.
